Curo Financial Technologies (Speedy Cash) Selects Lightstat for Energy Management System and LED Lighting

Barkhamsted, CT – March 30, 2017 – Curo Financial Technologies has selected Lightstat to provide LED lighting upgrades and complete Energy Management Systems for over 400 of their short-term loan and financial services facilities throughout the US and Canada. To date, Lightstat has furnished over 280 Speedy Cash locations with Energy Management Systems controlled by the eStat connected thermostat, with the remaining stores to be completed in 2017.

"The Lightstat solution was selected by Curo due to its competitive pricing as well as the built-in security of its EMS software which is critical to a company that provides financial services," said Scott Ward, Manager of Building Systems Integration, Curo Financial Technologies. The Energy Management System is driven by powerful web based energy management software to collect, view, analyze and log historical data and operational characteristics at a system level. 256-bit encrypted communications offer secure remote monitoring capabilities. Key features of the system include continuous real time monitoring, condition alerts, data collection and remote access.

In addition to Energy Management, Curo is also installing Lightstat LED Lighting products to help in further reducing energy consumption and meet safety, security environmental and lighting level requirements. LED lighting upgrades include outdoor LED light fixtures and indoor LED retrofit kits for existing fluorescent fixtures. Lightstat's LED series complements Lightstat's Automated Lighting Control (ALC) Systems and Title 24 compliant Dimming Panels, providing an integrated solution to better serve customers in optimizing overall environmental performance.

"It's exciting to serve the leading technology platform for short-term lending," said Scott Loveland, Lightstat's Vice President of Sales and Marketing. "We look forward to continuing to support Curo Financial Technologies with a comprehensive energy management solution that maintains optimal environmental performance."

About Lightstat
Lightstat is an Environmental Control industry leader, enabling business with intuitive, integrated and automated thermostat and lighting control systems for over 32 years. Backed by a Limited Lifetime Warranty, the Lightstat facility management product network reduces energy consumption, improves energy efficiency and optimizes overall environmental performance.
